

Guardrail Systems

Our freestanding guardrail is a lightweight counter balance guardrail system. As it's name implies this system can be installed completely freestanding with no need for drilling or penetration of the roof membrane.

Because the system is freestanding it is ideal for all flat roof edge protection including exposed roof edges, stairwells and open shaft protection as well as general demarcation.

The system is supplied in kit form using modular components. The number of components is kept to a minimum making ordering and specification quick and simple. Our freestanding guardrail is quick and easy to install and can be added to, reconfigured or adapted just as quickly. All components that come into contact with the roof membrane are protected by special protective rubber pads.

Our range of high quality galvanised fittings mean there's no need to bend or weld saving you time and money on site.

SIMPLE

Utilises the minimum numbers of components and requires no special tools for installation.

DURABLE

Galvanised anti-corrosion coating equivalent to BS EN ISO1461 with zinc coated steel grub screws.

VERSATILE

Prefabricated components allow quick and easy erection and adaption.

LIGHTWEIGHT

Lightweight components including a 100% recycled PVC counterweight weighing just 20KG.
